SELIM ELBADRI

B56 Sir Clive Granger Building, University Park, NG7 2RD, Nottingham, UK
selim.elbadri@nottingham.ac.uk www.selimelbadri.com github.com/selbadri +44 7584 084923

PLACEMENT INFORMATION

Primary Field	Macroeconomics, Growth & Development, Structural Change
Secondary Fields	Human Capital, Innovation
Expected Completion	March 2027
Placement Officers	Gianni de Fraja, Professor of Economics, gianni.defraja@nottingham.ac.uk Marit Hinnosaar, Associate Professor, marit.hinnosaar@nottingham.ac.uk
Placement Support	Natalia Bas, Senior Operations Officer, natalia.bas@nottingham.ac.uk

EDUCATION

PhD Economics [Candidate] 2022–2027 (expected)
University of Nottingham, UK
Thesis title: Essays on Growth & Development
Advisors: Markus Eberhardt & Juan I. Vizcaino

MRes Economics [Distinction] 2021–2022
University of Nottingham, UK

MSc Economics for Development [Merit] 2017–2018
University of Oxford, UK

BA (Hons) International Development [First Class] 2014–2017
King's College London, UK

JOB MARKET PAPER

Early Childhood Development and Structural Change [Paper] [Poster]

This paper presents a theory of how early childhood development shapes structural change. I document two novel cross-country facts: parental time devoted to young children (ages 0–4) and early childhood cognitive outcomes both rise with economic development, alongside the High-Skill Services employment share. I build a heterogeneous agent general equilibrium model that combines a multi-stage human capital technology featuring dynamic complementarity with non-homothetic preferences, unbalanced sectoral TFP growth and skill-biased technical change. Higher early childhood human capital produces a more skilled workforce, shaping structural change. The model matches time use, structural change and the skill distribution in the postwar US, and dynamic complementarity accounts for 29.8% of US structural change toward High-Skill Services. Finally, paid parental leave parameterized to Germany's *Elterngeld* accelerates the rise in the High-Skill Services employment share by 8.4% despite general equilibrium effects muting it. This finding suggests that paid parental leave can serve as a form of industrial policy.

WORKING PAPERS

An Anatomy of the Baumol Cost Disease [Paper]
Joint with Juan I. Vizcaino

We study how structural change shapes aggregate productivity through the allocation of production and innovation. Using U.S. data, we document that production employment moves from Goods toward non-research-intensive Services, while research employment moves predominantly toward research-intensive Services. We develop a general equilibrium model in which sectoral composition, capital deepening, and directed innovation are jointly determined, with heterogeneous markups and cross-sector knowledge spillovers. Holding initial value added shares fixed while retaining baseline sectoral productivity paths raises average annual aggregate productivity growth by 0.13 percentage points over 1950–2023. Removing the forces driving changes in value added shares and re-solving

the equilibrium raises growth by 0.37 percentage points, leaving productivity approximately 31 percent higher in 2023. An exact decomposition attributes 62 percent of this growth difference to the endogenous response of sectoral productivity. Innovation provides the largest positive contribution: sustaining the Goods sector's market share supports research and idea accumulation, reinforced by its reliance on its own knowledge stock. These findings show that the productivity consequences of structural change depend on both the reallocation of production and the innovation incentives generated by that reallocation.

A Services-Led Growth Escalator? [Paper]

This paper documents three new facts on productivity growth in services. First, the variance of services productivity growth is higher in developing countries than advanced ones. Second, services productivity growth (or lack thereof) is driven by broad-based improvements (deteriorations) across the different services sub-sectors ('within' channel) as opposed to sub-sector reallocations of employment to more productive services industries ('between' channel). Third, the 'within' channel's effect is partly driven by conditional convergence in services productivity between countries. Combined, these facts motivate a theoretical framework where, like the one-sector neoclassical growth model, the social planner faces a standard consumption-investment trade-off. Differently from the benchmark model however, the planner faces an additional static problem which involves allocating investment between two competing technologies. The first is a catch-up technology while the second is a CRS technology. The gains of the former depend on the level of development that is, the further away from the frontier the higher the returns. Crucially, a country-specific growth efficiency parameter interacts solely with the catch-up technology, scaling the marginal gains from this allocation. Productivity growth in the transitional dynamics therefore depends on three factors: the distance to the frontier, the investment rate and the growth efficiency level. Using the World Input-Output Database (WIOD), I calibrate the growth efficiency level to match the 2000–2005 compound annual growth rate of services value added per worker. The calibration outcomes are used for several quantitative exercises, including a variance decomposition of productivity growth in services as well as two counterfactual exercises. A key result of the paper is that assigning sample maximum growth efficiency levels and investment rates raises average growth among developing countries from an observed 3.6% to a counterfactual rate of 18.7%, closing 86.7% of the gap between observed average growth and the maximum potential growth rate.

RESEARCH EXPERIENCE

Research Assistant for Project: "Occupational Dynasties & Economic Development" 2023–2025
Authors: David Lagakos, Siddharth George, and Martin Shu
Remote

Visiting Researcher (Fall Semester) 2024
Host: Rodolfo Manuelli
Washington University in St. Louis, USA

WORK EXPERIENCE

Summer Intern, Economics Department 2025
Asian Infrastructure Investment Bank (AIIB), China

Summer Intern, Economics Department 2024
Asian Infrastructure Investment Bank (AIIB), China

MENA Country Risk Analyst 2018–2021
Fitch Group, UK

Short-Term Consultant 2018
World Bank Group (WBG), USA

Short-Term Consultant 2018
World Bank Group (WBG), Remote

TEACHING EXPERIENCE

Graduate Teaching Assistant 2023–2024
University of Nottingham, UK
ECON2012: Financial Economics

Graduate Teaching Assistant 2022–2023
University of Nottingham, UK
ECON1050: Introduction to Economics [Macro]
ECON1051: The Politics of Economics and the Economics of Politicians

CONFERENCE & SEMINAR PRESENTATIONS

2026 Washington University in St. Louis Economics Graduate School Conference (scheduled); Tools for Macroeconomists Research Workshop; International Economic Association (IEA) 21st World Congress; 2nd International Conference of the Georgian Economic Association; 16th Annual Meeting of the Armenian Economic Association
2024 Washington University in St. Louis Macro Brown Bag; Ruhr Graduate School (RGS) Doctoral Conference in Economics; Centre for the Study of African Economies (CSAE) Conference; University of Macedonia 8th International Meeting in Economics
2023 Nottingham PhD Economics Conference; Centre for the Study of African Economies (CSAE) Conference
2022 Nottingham MRes Dissertation Conference; Nottingham Macro Working Group

FELLOWSHIPS & AWARDS

Best Poster Award, Doctoral Training in Structural Change, Growth, and Economic Development 2026
ESRC +3.5 Doctoral Scholarship, University of Nottingham 2022
Top of Class, MRes Economics, University of Nottingham 2022
School of Economics Scholarship, University of Nottingham 2021
